## COMBINE & REFINES

## DISCUSSION

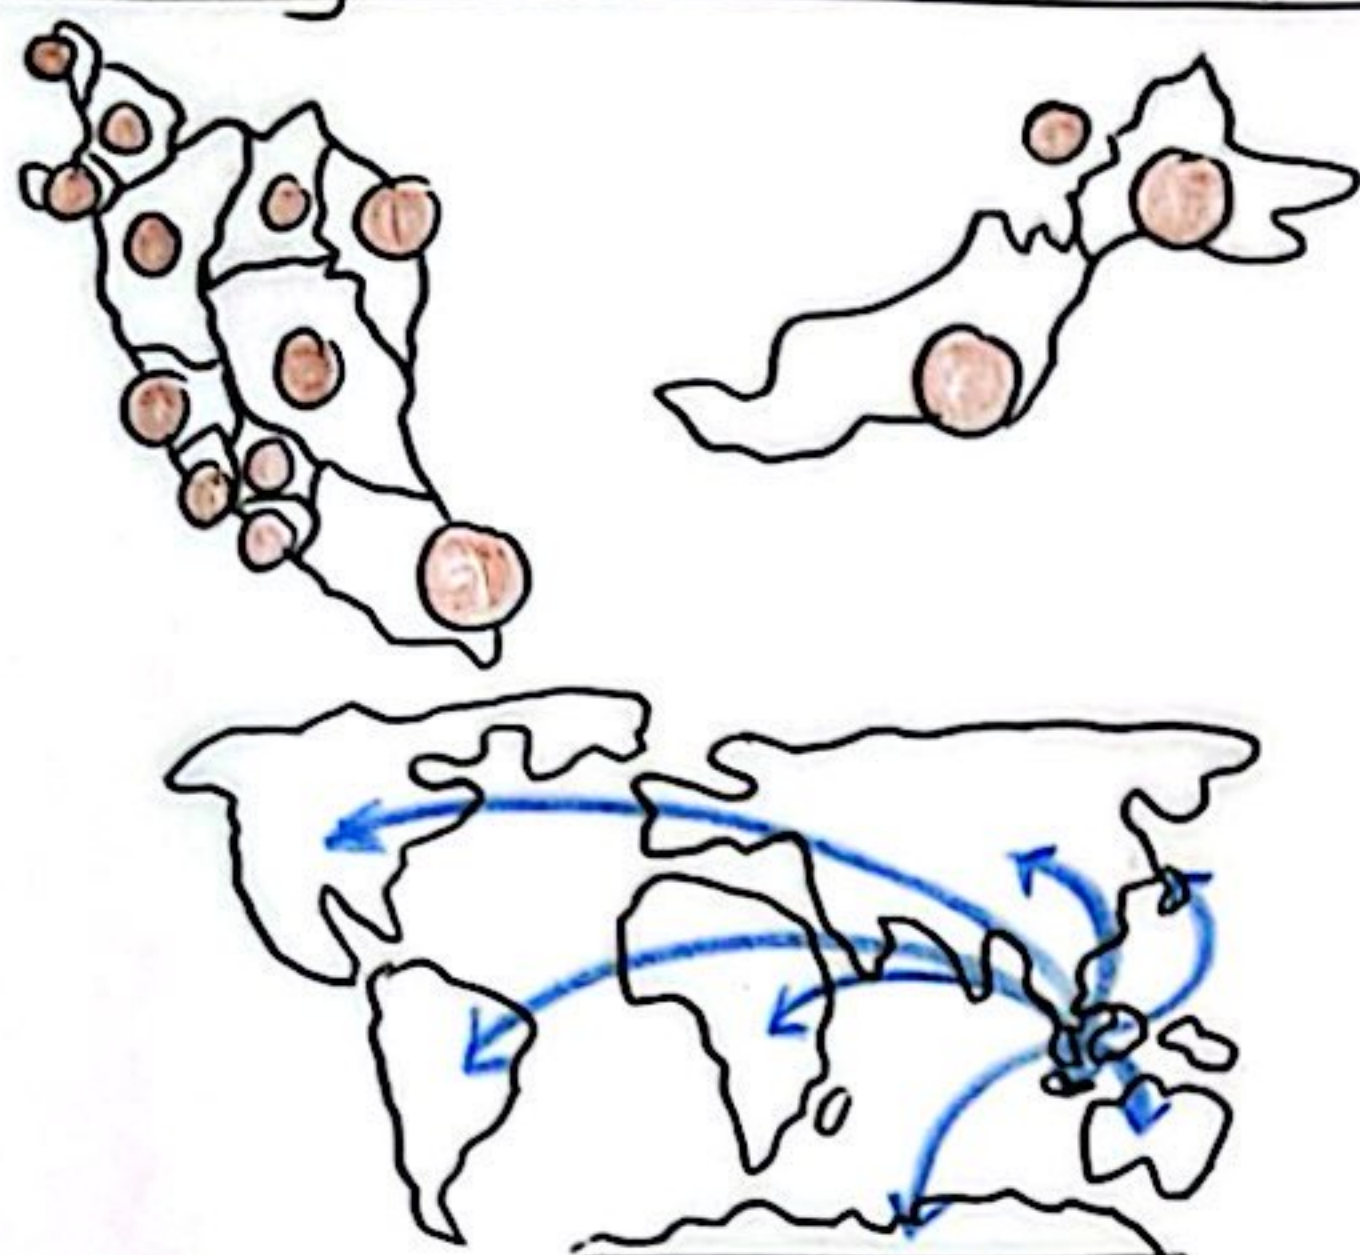

- can the graphs be implemented in vegalite?
- can the graphs be successfully implemented due to time constraints?
- should the graphs involved in time show the time monthly, daily, or yearly to convey the message better?
- are the graphs too simple?
- are the graphs chosen appropriate?
- how will the dashboard help or benefit hotels, accommodation, ministry of immigration, tourism industry and tourism companies in Malaysia?
- will the dashboard be unique and not similar to the other dashboards designed by the people with the same datasets?
- should the proportional symbol chart have double encoding?
- is the dashboard too clustered?

# LAYOUT

## Tourism Insights: Foreign Arrivals in Malaysia

### State Popularity and International Arrivals in Malaysia

conclusive chart descriptions

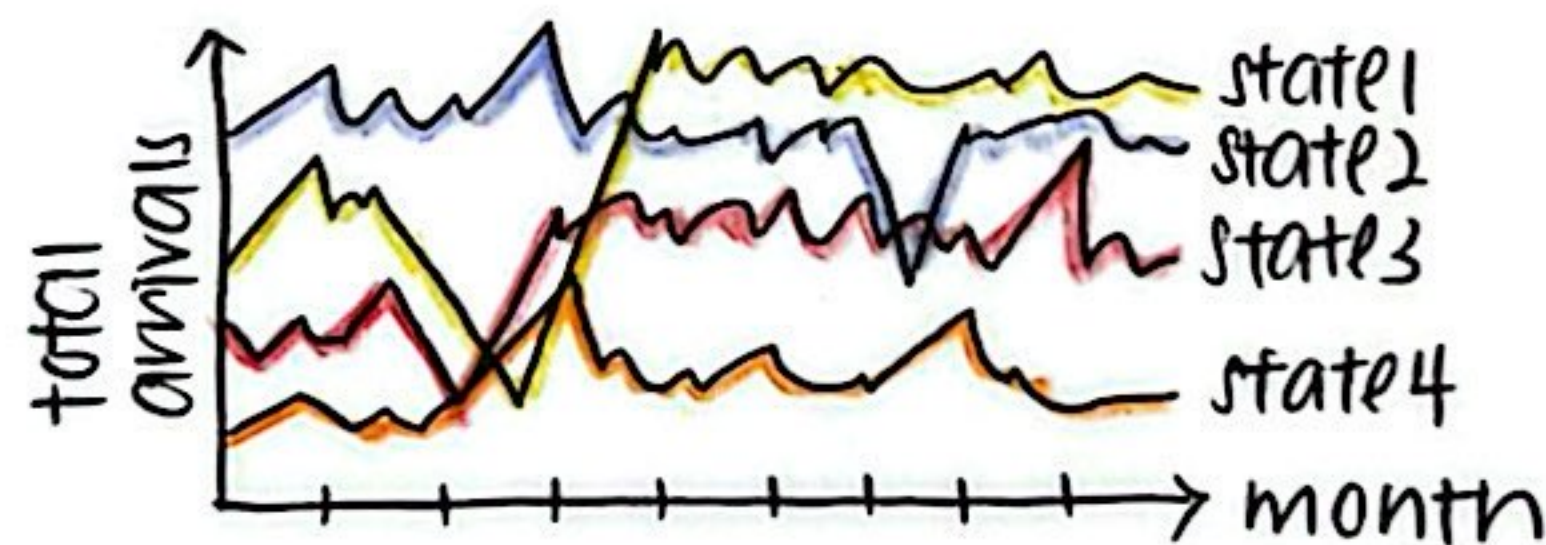

~~~~~  
~~~~~  
~~~~~  
~~~~~  
~~~~~

### Gender Breakdown and State Preferences

Johor  
Selangor  
Kedah  
Sarawak  
Penang

### Statewise analysis by month and year

## FOCUS

map idiom:  
proportional symbol map

- size of circle/ bubble on the map of Malaysia will change based on the number of total tourist arrivals into the states
- no double encoding due to redundancy hence all colour/hue of the circular symbol will be the same but size will differ
- obtain information/ insights: number of total arrivals by Malaysian states

Title: Tourism Insights in Malaysia  
Author: Fookaiyan  
Date: 12/10/2024  
Sheet: 2 Unit: FIT3179

## OPERATION

- allow mouse icon to hover over each circle/bubble to obtain information from the tooltip displayed on screen
- information displayed
  - Malaysian state
  - total arrivals count
  - total arrivals count by gender

## DISCUSS

pros (advantage):

- different bubbles/circles will display different information on tourist arrivals when tooltip shows
- without tooltip, users can also gauge the proportion of tourist arrivals by the size of the bubble/circle on the map

cons (disadvantage):

- sizes of the bubbles/circle might not easily differentiate the proportion of tourist arrivals if the class levels of the size is not very different
- attention would need to be paid to the overall dashboard sightlines and whiteness or will be messy layout

# LAYOUT

## Tourism Insights: Foreign Arrivals in Malaysia

### State Popularity and International Arrivals in Malaysia

### Gender Breakdown and State Preferences

### Statewise Analysis by month and year

Title: Tourism Insights in Malaysia  
Author: Foo Kai Yan  
Date: 12/10/2024  
Sheet: 3 Unit: FIT317

## OPERATION

- drop down menu to select focus state for the stacked bar chart
- if the state is selected then there will be annotations appearing at the end of the bar
- user's cursor if hover over the bars of the stacked bar chart will show tooltip information

## DISCUSS

pros (advantage):

- users can gain an idea on the gender distribution of tourist arrivals in each states in Malaysia
- easy understanding and to comprehend due to the use of traditional colours for genders

cons (disadvantage):

- Johor has the highest amount of tourist arrivals which will result in other states tourist arrivals to be similar amount even if they are thousands or million counts apart

## FOCUS

map idiom: stacked bar chart

- length of bars varies due to the amount of total arrivals
- tooltips contains information on state name, total arrivals, and total arrivals by gender
- once state is selected in drop down box, show annotation on the total arrivals of selected state at the end of the bar

# LAYOUT

## Tourism Insights: Foreign Arrivals

### State Popularity and International Arrivals

### Gender Breakdown and State Preference

### Statewise Analysis by month and year

## Focus

map idiom: multivariate line chart

- data will be displayed in months for selected viewing year (lines will change depending on selection)
- filter option by dropdown menu to select viewing year
- tooltips contain information on state and total tourist arrival count

Title: Tourism Insights in Malaysia

Author: Foo Kai Yan

Date: 13/10/2024

Sheet: 4

Unit: FITS17

## OPERATION

- dropdown menu filter for user to select viewing year for line chart
  - if year 2021 is chosen then only data for 2021 is shown on the chart
- users' mouse cursor hovers over the line in the multivariate line chart will show tooltips containing data information
- labels or annotations will be present at the end of line chart to indicate which state

## DISCUSS

pros (advantage):

- more in depth understanding on which months tourist activities peak and drop
- interactive charts will retain viewer attention and engagement

cons (disadvantage):

- Whitespace, sightlines, and spacing must be paid attention to when close to line chart or else will be having messy dashboard layout with compact and compressed charts

# LAYOUT

## Tourism Insights = Malaysia Foreign Arrivals

### State Popularity and International Arrivals

### Gender Breakdown and State Preferences

male  
female

### Statewise Analysis by time

# Focus

map idiom = flow chart

- data will be displayed as different thickness lines within the world map

- thickness the lines implies the higher number of total arrivals from the said country to Malaysia

- tooltips show when user hovers over the lines

Title: Tourism Insights in Malaysia  
Author: Foo Kai Yan  
Date: 13/10/2024  
Sheet: 5 Unit: FIT314

## OPERATION

- users cursor if hover over the lines within the flow map then there will be tooltips shown
- information displayed in the tools will be shown in a neat way with hierarchical structure

## DETAIL

① estimated time and effort needed to complete the dashboard

↳ dataset needs to be cleaned and manipulated

↳ include longitude and latitude

↳ might need 2 to 3 days due to other units assessment responsibilities

↳ implementing the charts and graphs within the dashboard might require 2 weeks minimum as complex graphs require more time and effort to complete

② final checking might require friends to test view the dashboard on their devices to ensure no problem
